

Based in Dallas, Crude Energy was founded on the fundamental principles of applying state-of-the-art petroleum and natural gas exploration and extraction technology to the development of onshore oil and natural gas projects.

- Crude Energy's focus areas include Texas, Oklahoma and Louisiana.
- Crude Energy offers oil and gas investment opportunities through direct-participation programs and oil and gas direct-participation working interest, which enable investors to participate in the potential cash flow and unique tax benefits associated with oil and gas investments. Especially important in a downturned economy, oil and gas investments allow savvy investors to diversify and reinforce their investment portfolios with a stable commodity that is in steady demand.
- Crude Energy is a large, independent (nonintegrated) oil and natural gas company in the United States with proved reserves throughout most major basins in North America.
- Crude Energy's exploration activities are focused on adding profit-generating production to existing core areas and developing potential new core areas.
- Crude Energy's production operations supply liquid hydrocarbons and natural gas to the growing world energy markets. Worldwide production operations currently are focused in North America, but the company also holds ownership interests in both operated and outside-operated leases in Canada, Europe and the Middle East.
- Crude Energy's primary goal is to increase the value of acquired properties through a combination of exploitation, drilling and proven engineering extraction practices, with its most significant emphasis on CO2 tertiary recovery operations.

**BE A PART OF THE U.S. ENERGY BOOM. INVEST WITH CRUDE.**

**CRUDE ENERGY**

Crude Energy offers investors the ability to invest directly in the oil and gas markets by selecting from two distinct investment vehicles. First, through Direct Participation Working Interest programs, investors can participate in the drilling of low-risk development wells in proven fields where oil and gas has previously been produced. Second, investors can invest in Crude's Royalty Income Properties which provide monthly income distributions without the responsibility of costs associated with monthly upkeep, exploration, or development of the royalty property.
